Designed Security, Inc. (DSI) announces changes to it's Access Control Products

After reviewing the tamper switch requirements of the ES4200 Door Management Alarm (DMA), the ES4300A Exit Alarm (EA) and the ES4600 Door Management Alarm with Voice, it was found that the majority of our customers do not always require the tamper switch option.

Effective April 1st 2008, our customers will have the option to order the ES4200, the ES4300A and the ES4600 units with or without the tamper switch by simply adding a "T1" or "T0" to the end of the part number. The cost will remain the same when ordering the product without the tamper switch, however, there will be a small up-charge to add the tamper switch.

Your lead time for these products will not change as we plan to keep plenty with both options in stock.
