Add touchless health safety to your DSI optical turnstiles

Detect masks and body temperature. Recognize people using fingerprint or facial ID

For years, DSI turnstiles have given companies like yours the power to secure your building entries using touchless technology.

Now the COVID-19 pandemic has added the need for employee and visitor health safety.

DSI can integrate mask and body-temperature detection plus facial and palm recognition to the DSI family of optical turnstiles.

STOP THREATS YOU CAN AND CANNOT SEE

The optical turnstile at your building's entrance does an excellent job of identifying and blocking unauthorized persons that may threaten your operations. But today, there are new threats that are harder to identify– in fact, that are impossible to see. These pose severe dangers to the health of your personnel, visitors, and anyone they come into contact with. It is imperative that you block these threats as well.

AUTOMATICALLY DENY NON-COMPLIANT ENTRY

To help stop the threat of COVID-19 and other diseases, integrating these new health features into your existing or new DSI optical turnstiles allows you to automatically block entry to anyone not meeting your defined health and protection standards.

QUICKLY IDENTIFY COMPLIANCE AND SPEED UP THROUGHPUT

DSI turnstiles, in conjunction with technology incorporating powerful embedded thermal cameras, can quickly recognize and allow access to authorized safety compliant users.

TOUCHFREE ACCESS CONTROL PRODUCT HIGHLIGHTS

- Touchless turnstile operation for health safety
- Mask and body-temperature detection
- Fingerprint and palm recognition
- Identification of persons wearing and not wearing masks
- Entry blocking for persons not meeting standards
- Full biometric technologies can be integrated with existing or new optical turnstiles

TOUCHFREE OPTICAL TURNSTILES FITTED WITH COMPLEMENTARY BIOMETRIC ACCESS CONTROL TECHNOLOGY CAN PROVIDE:

- Rapid facial verification from several feet away
- Body temperature detection with a high degree of accuracy
- Detection of subjects wearing or not wearing masks
- Touchless fingerprint verification using hand wave technology
- Bluetooth credential verification (uses cell phone for access credentials)

GET A FREE ASSESSMENT FROM DSI

DSI can help you evaluate your existing security hardware system to make sure you are protecting the health of your employees and visitors as well as securing your building.

Regardless of the type of public facility you operate—whether an office building, manufacturing plant, warehouse, school, hospital or any other—you need to protect the health of the people who use these spaces as well as the security of the facility itself.

DSI can integrate touchless health safety equipment for mask and body-temperature detection as well as facial and fingerprint recognition capabilities into your building security, enhancing your health safety and security measures.
