

Ensure only one entry for one person

Sound an alert when someone attempts tailgating, piggybacking or unauthorized entry into a secure area

DSI Entry Sentry solutions are perfectly suited for areas requiring a higher level of security. These devices help ensure that only one individual enters through a secure doorway for each valid authorization.

The Entry Sentry alerts you to “tailgating,” when someone deceptively follows an authorized person into a secure area, and “piggybacking,” when an authorized person intentionally holds a door open for another.

A SINGLE APPROACH TO MULTIPLE THREATS

Whether monitoring the entry of unauthorized people into your building or into higher security areas within the facility, Entry Sentry solutions provide critical protection for a range of applications.

Hospitals rely on DSI to limit access to pharmaceuticals and patient files. Data centers use Entry Sentry to control access to both servers and their critical databases. Airports monitor employee entrances and exits as well as baggage areas. Manufacturing plants keep unauthorized persons out of clean rooms.

ACCURACY FOR RAPID PEDESTRIAN FLOW

The proprietary technology of Entry Sentry uses 32 infrared sensors to detect unauthorized entry. This provides an accuracy that avoids false alerts for authorized persons carrying briefcases or pulling roller bags. At the same time, it admits as many as 60 authorized persons per minute.

TWO LEVELS OF ALERT FOR ENTRY MONITORING

DSI Entry Sentry solutions give you two options for monitoring unauthorized entry. On detecting unauthorized entry, the cost effective ES5200 sounds a local alarm and sends an alert to your security team. The ES5600 sends an alert and issues a local voice command (typically “Warning: Tailgate Violation!”).

ENTRY SENTRY PRODUCT HIGHLIGHTS

- One read/one entry enforcement at each entry point
- Compatible with all turnstile access control systems
- Stand-alone mount for standard door frames and hallway walls
- Immediate audible alarm upon unauthorized entry
- In the case of a breach, remote and local alarm notification for security team
- Accurate and cost effective

A Detex Company

ADD EXTRA SECURITY AT ENTRIES AND CONTROL ACCESS TO HIGH SECURITY AREAS INTERNALLY

- Encourages employees to maintain access control procedures
- Ensures only one person enters a secure area per authorization
- Increases security with integrated door prop alarm
- Allows multiple card reads and passages without waiting to resecure the door
- Enables passageways to be open in both directions at the same time
- Simplifies installation to reduce costs of time and materials
- Works with access control or as a stand-alone device

GET A FREE ASSESSMENT FROM DSI

DSI can help you evaluate your existing security hardware system to make sure you are not allowing either intentional or unintentional access to your building and its secure areas.

Regardless of the type of facility you operate—whether an office building, manufacturing plant, warehouse, hospital or any other—you need to make sure that unauthorized pedestrians cannot sneak into your facility simply by following authorized persons.

DSI can integrate its Entry Sentry solutions with your new or existing security system to ensure only one individual enters through a secure doorway or area for each valid authorization.
